

TOKENOMICS ONE-PAGER

Turning unrecyclable plastic into value, a utility token backed by real pyrolysis operations

SNAPSHOT

- Token: IGNA (SPL on Solana)
- Total supply: 1,000,000,000 IGNA (fixed cap)
- Backing model: 20% of pyrolysis oil revenue allocated quarterly → 5% buybacks (first 5 plants: repurchased tokens burned) + 15% liquidity reinjection
- Primary mission: Finance & scale pyrolysis plants that convert unrecyclable plastic into oil; funnel part of revenue back to token support
- Pre-Sale note: Closed in December 2024, ahead of EU MiCA regulation. Unsold tokens were transferred to liquidity for potential future use in line with project strategy.
- Contact: ignatoken@gmail.com

KEY ALLOCATION (V1.3)

- Liquidity: 30% (300M)
- Management/Team: 30% (300M) → released in 10 × 3% tranches, each tied to the opening of a new pyrolysis plant. This model links management rewards to real-world achievements (permits, construction, logistics, jobs created) and prevents sudden large sell-offs. Tokens are multi-sig locked, ensuring transparency.
- Private Sale: 23% (230M) → Angel (8% / 80M, 3-year cliff + 12-month vesting) + Supporter Packages (15% / 150M, 3-year cliff + opt-out repurchase if price < \$0.02).
- Reserve: 7% (70M)
- Marketing: 7% (70M)
- Pre-Sale: 3% (30M) — closed Dec 2024, unsold tokens moved to liquidity.

HOW THE REVENUE-BACKING WORKS (SHORT)

- Operational plant sales → quarterly revenue allocation
 - 5%: Buyback of IGNA tokens (first 5 plants: tokens burned to reduce supply).
 - 15%: Liquidity injection on Raydium and future exchanges.
- Transparency: Buyback logs (dates, USD spent, tokens acquired, tx hashes) published quarterly.

PERSONA QUICK READS – WHAT MATTERS TO YOU

- Conscious Investor: Real revenue link + proof. Buybacks tied to plant sales, transparent logs, nonprofit governance. Stability, impact, and accountability.
- Cautious Beginner: Clear steps, low friction. Use the “How to Buy IGNA” guide on ignatoken.com/swap (Raydium & Jupiter). Start small (€50–€200). Always verify contract address.
- Web3 Builder: On-chain proof + depth. Contract & audit PDF/timeline, buyback tx hashes, and vesting wallets will be published for independent verification.

WHERE TO BUY (QUICK)

- Raydium DEX: Connect Phantom → Swap IGNA/USDC.
- Jupiter aggregator (site): ignatoken.com/swap – add IGNA if needed:
- `ignFri3b6VJxpov64XMa2d81dWrHrMAJLWkFAM6ER4f`
- Slippage tips: Raydium 1–3% (normal trades) · Jupiter 5–10% (low liquidity).
- Note: IGNA is currently listed on Raydium/Jupiter. By end of 2025, EU MiCA rules may require moving to a MiCA-licensed centralized exchange.

MAIN RISKS (ONE LINE)

Market volatility · plant construction & operational delays · regulatory changes (MiCA/CASP) · custodial risks · Solana network performance.
